

- We are 2 iterations into our 4 iterations, therefore:
 - Reflect on how the last 2 iterations went (survey questions will help)
 - We were able to deliver our features on time. The customer was happy with what we delivered. The team worked very well and met all the expectations that we had for each other and the project so far.
 - Decide on the following about your app when all 4 iterations are done:
 - What NEEDS to be done?
 - Filter calendars/events based on individual users
 - Create a nice looking login page
 - What do you WANT to be done?
 - Integrate and communicate with the other city dog share team so that events can be created and confirmed
 - What do you WISH to be done?
 - Implement all user stories polish the presentation of our features
 - Work backwards from the above to figure out a plan for the next 2 iterations
 - Post the plan on your customer meeting notes document by tomorrow night

Plan:

Iteration 3

- User logs on to view a public calendar → User logs on to view a personal calendar
- Linking login to personal calendar via fbook login
- Get personal profile API from other group ASAP

Iteration 4

- Better Login Page - Bootstrap
- Integrate dog profile data pull
- Integrate user profile data pull
